about radio aporee

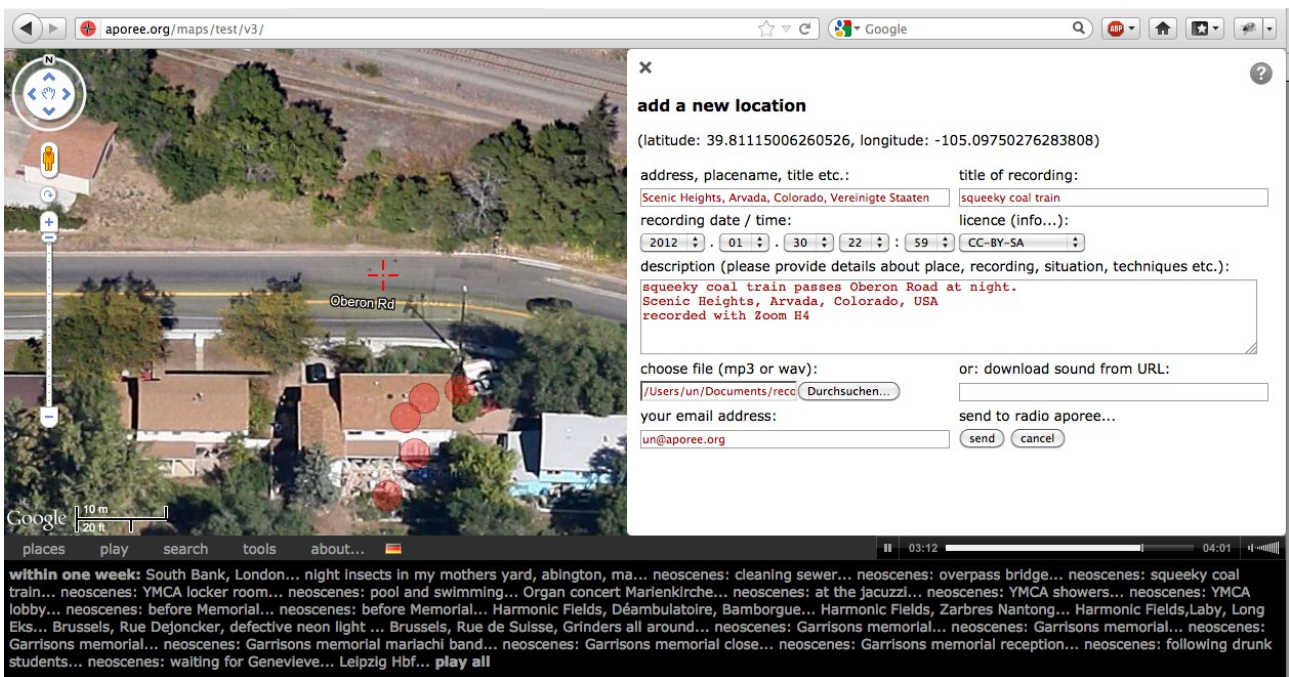

radio aporee is a project & platform for the artistic research of concepts and practices related to sound, place and spatial conditions. It provides tools and techniques for the engagement and interaction with actual environments, in and in between *real* and *virtual* spaces. It suggests *listening* as a way to enrich and intensify the experience and perception of the world around us.

radio aporee ::: maps

The [radio aporee ::: maps](#) is one of the major, long-term projects on radio aporee. It is a cartography of sounds from all around the world. Meanwhile, it contains many thousands of field/location recordings from numerous urban, rural and natural environments, public and private spaces, showing the audible complexity of our world, as well as the different perceptions and artistic perspectives of its many contributors, related to sound, space and places. The soundmap is used and populated by individuals, artists and institutions, in various contexts and manifold configurations.

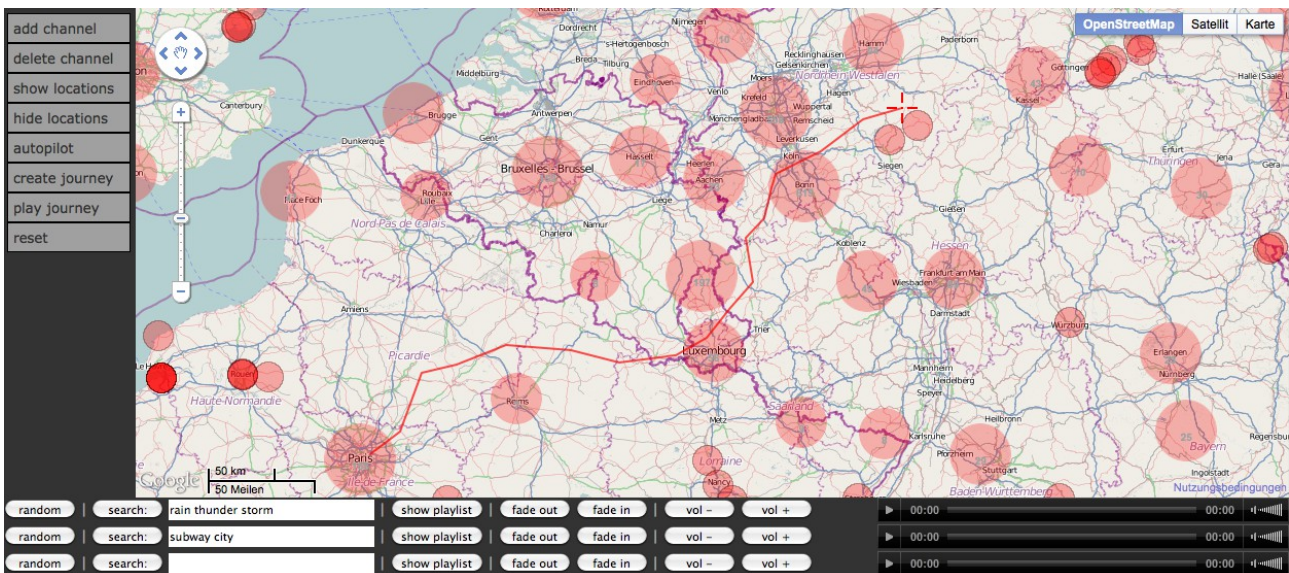

radio aporee ::: maps – 32591 recordings at 28329 places, total length of over 74 days , as of Mar. 13, 2016

Contributing to the project is easy. A click on the map opens an intuitive upload interface for the sound file and other useful meta data (place, title of recording, license, recording date, keywords, description, contact etc.). Please be aware of and respect the [posting guidelines!](#)

radio aporee ::: maps – upload interface for easy contribution of sound files (mp3 or wav)

There are different ways to explore and listen to sounds and places, from playback of single locations to multi-channel sound journeys:

radio aporee ::: maps – multiplayer interface for up to 5 channels in geographic mixing mode

A simple but powerful search engine for exploring sounds and places in different than geographic contexts, e.g. based on themes, keywords or contributors:

radio aporee ::: [maps] [stream] [miniatures for mobiles] [mobile app] [projects]

radio aporee ::: maps - search

rain -train

in titles, descriptions and placenames. separate words by spaces, exclude words with "-". example: rain -train.

search only around this geographic coordinates (click on map):

latitude: 52.518628

longitude: 13.421600

search

Karte

results:

radio aporee ::: miniatures for mobiles

In near future, we think it will be impossible to escape the omnipresence of mobile computing. We see it as spaces or layers of reality, created by the superposition and intersection of physical space with media and information, right at your current location. This may improve our life, or fragment it even more, but it has already evolved into a social practice. For companies and consumers, this probably translates to improved shopping. For us, it raises questions about creative strategies, ideas and alternatives against the *functions* and *fictions* of solely market-driven forces.

The *miniatures for mobiles*, another important project on radio aporee, utilizes most recent mobile computing technologies in order to turn your sophisticated smart phone into a receiver for a *different radio*.

It is a project, platform and tool for the creation of location-based sound/art works in public space. It closely integrates the aporee soundmap, provides web-based tools for authoring, and a *mobile phone app* (android only so far...) for on-site listening. It turns your phone into a location-sensitive *receiver*, for a *different radio* that exceeds its boundaries and literally surrounds the listener. While walking through and listening to the immersive *augmented aur(e)ality* of a mobile radio, the listener interacts with places, sounds and narratives. Movement leaves traces in space and time, recorded as individual sound/tracks, which can be heard by others synchronously during a listener's walk, or at any time from the archive of recorded sessions.

radio aporee ::: miniatures for mobiles, recording sessions for the RADIO-Ortung project series produced by Deutschlandradio Kultur 2010/2011)

Once all sound recording work is done, creating the mobile miniature with a web-based editor is (almost...) as easy as contributing to the radio aporee soundmap:

radio aporee ::: miniatures for mobiles for udo noll: berlin neukoelln walks (radio aporee testcase) | add new | delete

show aporee ::: maps | Satellite | Map

change global settings:
 title: berlin neukoelln walks (radio aporee testcase)
 description: this miniature is only for testing, a bunch of locations in front of the aporee headquarter. will hopefully evolve into a grown-up sound play soon... stay tuned.

miniature is public and visible on the phone:
 miniature is listed on the miniature's website:

miniatures for mobiles app

Since 2010, miniatures for mobiles have been created all around the world, in the frame of workshops, festivals, exhibitions and site specific projects. Deutschlandradio Kultur has produced a successful series of works with artist groups, based on the radio aporee platform and concepts. More to come...

radio aporee ::: stream

radio studio in a pocket

radio aporee continuously plays recordings from the [global soundmap](#). however, it's a responsive / sensorial stream of sound that may (or may not...) recognize and react to events, e.g. new sound uploads, listeners tuning in, activity within the miniatures for

mobiles, live sessions, phone calls and some more. It's an ongoing experiment exploring affective geographies and new practices related to sound/art and radio. radio aporee operates with an extended notion of *the field*, which reflects and questions the impact of global networks on our understanding of space, and the possibility of new forms and formats for engaging with our audible environments. Within this notion, radio is both a technology in transition and a narrative. It constitutes a field whose qualities are connectivity, contiguity and exchange. The most recent developments aim to establish a collaborative radio praxis among listeners, contributors and curators. Things to come...
